the serial number of the. is the manufacturer's serial number of the device.1. field of the invention the invention relates to a method and apparatus for measuring a shear force of a flow of fluid. 2. description of the prior art in measuring a shear force of a flow of fluid, it is known to utilize a transducer arrangement comprising a force transducer which is mounted to a support and adapted to measure a force which is caused by the flow of fluid. a disadvantage of such a known measuring arrangement is that the transducer is sensitive to outside forces which may be transmitted to the force transducer in the form of vibrations, shocks, etc. the transducer is also sensitive to the flow of fluid around the force transducer, especially when the transducer is supported in a flow of fluid. the force transducer is therefore sensitive to variations in fluid characteristics which may affect the flow of fluid. the fluid characteristics may be the viscosity of the fluid or the velocity of the fluid flow. it is also known to use a pressure sensitive element in measuring a shear force of a flow of fluid. this pressure sensitive element may be a capillary tube which is mounted in a flow of fluid and which is subjected to a pressure. the pressure sensitive element is then moved by the pressure and the displacement of the pressure sensitive element is related to the pressure. a disadvantage of such a measuring arrangement is that the pressure sensitive element is sensitive to outside forces which may be transmitted to the pressure sensitive element in the form of vibrations, shocks, etc. it is also known to use a piezoelectric element in measuring a shear force of a flow of fluid. the piezoelectric element is in the form of a plate which is coupled to a support. the plate is arranged to deform by an amount which is proportional to a shear force of the flow of fluid. the deformation of the plate is related to the shear force of the flow of fluid and a voltage is applied to the plate. a disadvantage of such a measuring arrangement is that the piezoelectric element is sensitive to outside forces which may be transmitted to the plate in the form of vibrations, shocks, etc.

category: mobile web web browsers are great at what they do, the most obvious examples being their role as the primary interface between the users and the world wide web. but some of the most powerful features of the browser have never been used that way, but rather as a developer tool for the browser itself.
