I used to say that Linux is the best OS I could use with my Digital cameras and still say it, but then I used the Ubuntu Studio version of Ubuntu. I thought that Linux Studio was perfect. Even though I like to put back OS X on my Macbook Pro and I keep it updated, this Ubuntu Studio version of Ubuntu works better than the OS X version and OS X keeps getting better with each release. This version seems smoother than any version I have used, and so far I like the changes to the photo import. If you do manage to get it installed successfully, the.dng feeback files don't appear to be converted to jpegs at the time of import. For some reason, I was hoping these files would be but they aren't. Someone mentioned earlier that jpgs are probably the most fickle file format to work on when using light-room. This is evident when zooming in on layers and when moving objects around without having spot removals. I'm just going to say, they are a pain in the ass. However, if you want to work on using light-room on the iPad, that is great. Yes it is also taking over the computer though, and it isn't always responsive outside of the app. I know there is a list of documents on the iPad side and wonder, will they copy over automatically. I'm thinking a better interface for copying files back and forth between the iPad and the computer would be great. I think its a good move, but I wonder if they might have also moved to a wifi capable type of cable from ethernet. Seems like they may be taking a roll over. Even though the price is appealing, I can't see myself replacing my laptop with a device without a cable. With the advancements in connectivity and data transfer capability, I don't think its that big a leap to replace a notebook with a device that would fit in a large purse. If I had been looking more at a smaller device, I might have considered acquiring the power adapter and internal charging to replace my current power brick. I think it would be better to have it all in one package that plugs in

directly so that I could also recharge it.

In the recent years, Adobe has implemented tons of new features to speed up its processes. But at the same time, it has made sure that the "Designing" experience is not affected much.

So it is best to go slow in the early days and select the right tools to do the right job. Using all the various features of Photoshop is an art in itself. Designers have to go through many trials and many mistakes to understand the software and their workflow. At times, you need to think of it as a whole new designing tool.
