I tried both Lightroom 4 and 5. Nothing unusual in the 5. The main difference is that the interface is neater. Right click, stop snapshot, 4 different but similar tools, add image, you're done. Don't remember that being so easy in LR4. Took me about 30 min. to get up to speed. This isnt like C1 where you have to create a library but you're still on dev. mode. I would wat to try 5.1.5 too. "When you download Lightroom, you open the box and start applying Lightroom to your photos. If you continue to be frustrated with Lightroom's performance, however, then it's time to learn a bit about what Lightroom is and how it works. The box you opened was not the only version of Lightroom. The Lightroom software that you actually used to download was a preview release (called the Team Preview)." Great article! This is a must read for every amateur photographer. I'd like to add I have a personal diary of my Lightroom learning curve on my blog. For example, one thing I learned about Lightroom, was how to turn off the updates. I'd downloaded Lightroom 4 when it came out and it has just stayed with me for years. I then discovered when it comes to Lightroom 5, you have more control of when you update. You can make sure it updates when a new version comes out or you can choose to turn off updates. Check out the tab "Updates" to control when updates happen. I'm also loving the annotate feature, it's so great that it has the same control of a pen tool—see the image below where you can control the shape and the color of the margin annotations. I wish they'd allow this for text too.
